POLATLI GRAIN EXCHANGE

Founded on 16 April 1984

The Polatlı Grain Exchange is considered as a public institution, dealing with sales transactions, registration of sales and declaration of commodity prices quoted at the Exchange.

It is the reliable grain market where supply and demand meet.

In our commodity exchange, there are 239 active members from 7 different sectors.

Our Mission:

To enable steady growth of all our services

in accordance with overall needs and expectations of the members and producers in a rapid, unbiased and reliable manner by continuous development and change.

Our Vision:

To make our Exchange the leader of National Spot and Futures Exchanges,

by bringing together the buyers and sellers trading agricultural commodities in the country, in a modern, mutually trustworthy and healthy environment.

Our Exchange served not only the producers in our district, but also the producers and traders from 90 districts of 28 provinces in the country in 2013.

54% of the transactions in the Auction Room are accounted for products coming from other districts.

The volume of grains sold through our Exchange exceeds 1 million tons, whereas the average grain production in our district is 400,000 tons.

The following services were provided by our Exchange, supporting the works of our members and producers in 2013:

Service Type	Quantity
Weighing	41,468
Laboratory Analysis	36,887
Sales (# of transactions)	36,887

Trading Volume and Monetary Value in our Exchange by years

YEAR	VOLUME (Tons)	VALUE (TL)
2011	1,651,240	923,408,000
2012	1,396,173	802,958,000
2013	1,627,928	1,040,240,991

On 30 June 2013; 10,263 tons of grains were sold in the Auction Room, the highest volume of sales so far.

Again on the same day, the total volume of sales registered by the Exchange reached 15,476 tons, including out of Exchange sales.

Prices of the grains sold in the Exchange Auction Room are immediately published on our website.

Any user can also monitor all transactions via smart phone applications launched in 2013.

On 11 July 2011, the Polatlı Commodity Exchange was authorized by «the Ministry of Customs and Trade» on purchase and sales of grain warehouse receipts issued by the Licensed Warehousing. In 2010, a licensed warehouse with a storage capacity of 40,000 tons was constructed with steel silos by the PTB (Polatlı Warehousing Corp.), an affiliated company of the Polatlı Grain Exchange.

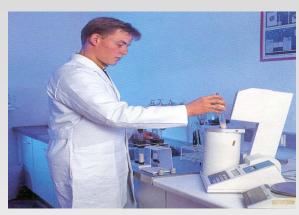

In the harvesting season of 2011, the LICENSED WAREHOUSING was launched.

It has been serving the grain producers and traders since then.

CONVERSION OF GRAINS TO WAREHOUSE RECEIPTS

Producers or traders bring the commodity to the Licensed Warehouse (LW) Corporation.

Samples are classified by the Authorized Grader.

The grain lot is unloaded to the storage silos after weighing.

A warehouse receipt is issued for the delivered grain and given to the producer or trader.

LW Corp. forwards the data required for the delivered commodity to the Central Registering Authority.

Volume and Number of Receipts Registered by the Polatlı Commodity Exchange by years

YEARS	VOLUME (Tons)	Quantity (Pieces)
2011	7,672	334
2012	35,397	2,057
2013	23,551	824

WORKING SYSTEM

How does the Exchange operate?

Grain loaded vehicles of producers get in the queue for weighing and sampling

... and they pass through the 60 ton capacity weighbridge.

The weighbridge is equipped with computer-based data acquisition and recording systems.

During weighing, data about commodity and producer are

During weighing, data about commodity and producer are collected and conveyed to the laboratory.

After declarations by the producer, the weighing officer signals the sampling officer to start sampling.

Sampling is carried out by an automatic probe with 180 degree flexibility.

Samples taken are transferred to the lab via pipe lines.

Samples are collected in the collection cup and passed to bowls.

... Then, bowls are set in the queue and samples are divided into two; one for testing and one for witness.

First, foreign material content is determined,

Second, protein and hardness tests are conducted.

Then, hectoliter and moisture content are determined.

Engineers determine the percentage of damaged and broken kernels, and other grains.

- The grain quality and turn number are placed at the upper part of the screen.
- Prices from other exchanges in Turkey are also displayed at the bottom.

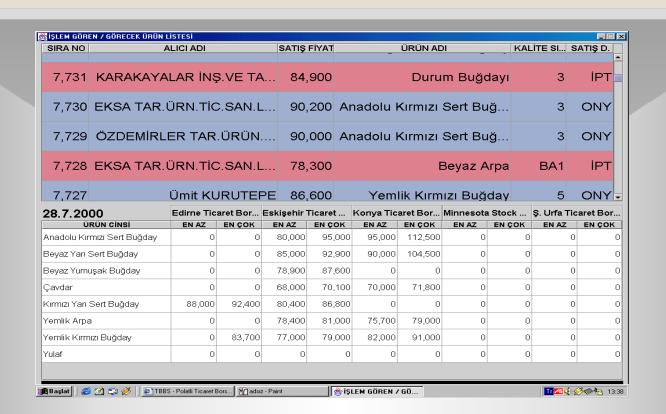

- Auctions and transactions are supervised by the floor administrator (auctioneer).
- Transaction lines in yellow mean that they are still waiting for the consent of the producer.
- The lines in blue mean that the producer has agreed to sell his lot at the given price.

During auction, properties of each sample are displayed for traders (the screen on the left):

- → Already completed transactions with average prices are shown at the upper part
- Specifications of the product to be sold are shown at the lower part.

Red line means that the producer did not accept the formed price and cancelled the sales transaction.

- <u>First Registration Section</u> where the relevant data of the producer/seller are taken.
- Here, the <u>Joint Agreement Form</u> is issued and signed by the <u>producer</u> which is automatically reflected to the floor screen; then,
- The buyer's depot number, a witness sample, the lab report and the first registration form bearing the selling price are given to the producer.

Then, the producer takes his lot to the buyer for unloading.

After unloading, the buyer makes the payment and arranges necessary papers.

Later, an Exchange Officer checks the delivery, sales receipt and payment; and carries out the necessary procedures to complete the transaction.

Buyers sell and ship the purchased lots to flour mills, compound feed mills or other dealers when they find the right price to sell the commodity.

Any question?

THANK YOU
